we simulate -1 to total so we have to add something in the end, (so we account the power of 0)

↑ very hard

maybe it requires to add some thing to the end

now to look for a way to do it for 0 and code it

4050

$(45\times90)\times 0.\dot{3} = 1350$

$1350 \times 5 = 6750$

ind^{90}
